Work Experience

PERSONAL SABBATICAL & PROFESSIONAL DEVELOPMENT - May 2, 2025 - Present

- Took a career break to focus on personal priorities following a death in the family while selectively pursuing software engineering opportunities
- Rebuilt personal portfolio using React and developed personal projects while practicing AI-assisted software development with Claude

SOFTWARE ENGINEER - Fortrea (spin-off from Labcorp) - July 2023 - May 2, 2025

- Engineered and enhanced client-facing features, including custom reports, visual dashboards, and configurable patient event scheduling to support evolving functional requirements
- Resolved production support incidents by analyzing product usage, correcting patient data issues, and delivering feature enhancements aligned with evolving client requirements
- Collaborated with project managers for finalizing deliverable requirements such as patient invitations to clinical trial, scheduling, and questionnaires
- Eliminated patient data discrepancies through use of MySQL queries by correcting erroneous data from client requests, generating reports for analysis, and preventing future discrepancies

SOFTWARE ENGINEER - Labcorp Drug Development (Covance) - January 1, 2021 - July 2023

- Expanded management interface used by the clinical trial team by creating and updating new features such as data management tools
- Improved patient data security and accuracy through the creation of a multi-approval process for specific user roles to be utilized for patient data change requests
- Developed and implemented data status workflows validated by patient data API calls to support clinical trial database lock procedures
- Enhanced patients' data viewing by creating a front-end interaction of report data, such as ePRO completion rate and patient visits completion, by utilizing flexmonster API for display and modification

SOFTWARE ENGINEER - snapIoT (Acquired by Covance - Jan 1, 2021) - January 7, 2019 - January 1, 2021

- Expanded users' clinical trial capabilities on the management application by creating new features such as questionnaire scheduling and patient information display via Angular components.
- Upgraded the questionnaire system by utilizing the flowable API system and Angular, creating the infrastructure for scheduling reminders and questionnaires to patients
- Reduced work of adding new user permissions manually for existing users by creating a reusable SQL script

JUNIOR FULL STACK WEB DEVELOPER - EDITS LLC - February 7, 2017 - March 30, 2018

- Rebuilt website with Node.js and ReactJS to create a more efficient and better user experience
- Ensured state based data transfer between React components through the implementation of Redux
- Restructured legacy MySQL database using Sequelize to implement new website features and create a more efficient data structure while versioning existing tables
- Learned and applied different libraries such as Lob and Stripe to effectively meet feature requirements and improve user experience

Education

UNIVERSITY OF CALIFORNIA - SAN DIEGO

Bachelor of Science in Computer Science GPA: 3.342

La Jolla, California

Graduated: December 2016

Skills

- Languages: Typescript, Javascript, Groovy, Html/CSS, Java, SQL
- Tools/Environments: Git, Angular, MySQL, Node.js, React, Redux, Jenkins
