Education

UNIVERSITY OF CALIFORNIA - SAN DIEGO

Bachelor of Science in Computer Science GPA: 3.342

La Jolla, California

Graduated: December 2016

Work Experience

SOFTWARE ENGINEER - Fortrea (spin-off from Labcorp) - July 2023 - May 2, 2025

- Utilized Angular framework for maintaining UI and completing client requests such as custom data reports and custom schedule generation for users and patients
- Developed modular components for integration into existing and new designs to ensure sustainable code
- Contributed to new and existing client projects to support evolving features such as custom reports, visual pages, and custom scheduling of events for patients
- Provided client support for production services to clients such as product usage investigations, data corrections, and creation of new features for evolving requirements
- Collaborated with project managers for finalizing deliverable requirements
- Utilized MySQL for data corrections, report creation, and data investigations

SOFTWARE ENGINEER - Labcorp Drug Development (Covance) - January 1, 2021 - July 2023

- Utilized Angular framework for updating and creating new features such as data management
- Created a multi-approval process regarding data changes for security and patient data protection
- Created dashboard for viewing and reviewing patient data and history of changes
- Created front-end interaction of report data, utilizing flexmonster API for display and modification

SOFTWARE ENGINEER - snaploT (Acquired by Covance - Jan 1, 2021) - January 7, 2019 - January 1, 2021

- Utilized Angular framework for updating and creating new features such as questionnaire scheduling and patient information display on the management application
- Upgraded the questionnaire system by utilizing the flowable API system and Angular, creating the infrastructure for scheduling reminders and questionnaires to patients
- Created SQL script for adding new user permissions for existing users

JUNIOR FULL STACK WEB DEVELOPER - EDITS LLC - February 7, 2017 - March 30, 2018

- Rebuilt website with Node.js and ReactJS to create a more efficient and better user experience
- Utilized Redux alongside ReactJS to ensure reusable data throughout the web application
- Restructured legacy MySQL database using Sequelize to implement new website features and create a more efficient data structure
- Learned and applied different libraries such as Lob and Stripe to effectively meet feature requirements and improve user experience
- Participated in bi-monthly meetings with the team to showcase completed features while providing feedback and check functionality

Skills

- Tools/Environments: Git, Angular, MySQL, Node.js, ReactJS, Redux, Jenkins, Visual Studios, SourceTree
- Languages: Typescript, Javascript, Groovy, Html/CSS, Java, SQL
