Summary

Software Engineer with 8+ years of experience developing web applications and software solutions using TypeScript, JavaScript, React, Angular, Node.js, SQL, and MySQL. Experienced in full-stack development, API integrations, data-management workflows, client-facing features, and production support for healthcare and clinical-trial applications.

Work Experience

PERSONAL SABBATICAL & PROFESSIONAL DEVELOPMENT - May 2, 2025 - Present

- Rebuilt personal portfolio using React and developed personal projects to practice AI-assisted software development using Claude to support development, debugging, and exploration of implementation approaches.
- Took a career break to focus on personal priorities while selectively pursuing software engineering opportunities

SOFTWARE ENGINEER - Fortrea (spin-off from Labcorp) - July 2023 - May 2, 2025

- Engineered and enhanced client-facing features, including custom reports, visual dashboards, and configurable patient event scheduling to support evolving functional requirements
- Resolved production support incidents by analyzing product usage and correcting and preventing patient data issues through MySQL queries to investigate the audit trail table and Flowable processes generation
- Delivered feature enhancements through creation of new Flowable processes and Groovy scripts to align with evolving client requirements resulting in accurate and efficient clinical trial application usage
- Collaborated with project managers for finalizing deliverable requirements such as patient invitations to clinical trial, scheduling, and questionnaires resulting in accurate deliverables and timelines for both client and project managers
- Eliminated patient data discrepancies through use of MySQL queries by correcting erroneous data from client requests, generating reports for analysis, and preventing future discrepancies

SOFTWARE ENGINEER - Labcorp Drug Development (Covance) - January 1, 2021 - July 2023

- Expanded management interface used by the clinical trial team by creating and updating new features such as data management tools to allow more control and security of thousands of patient records per client
- Improved patient data security and accuracy through the creation of a multi-approval process for specific user roles to be utilized for patient data change requests, allowing more client control over hundreds of thousands of patient records
- Developed and implemented data status workflows validated by patient data API calls to support clinical trial database lock procedures, allowing for smoother clinical trial completion transition
- Enhanced patients' data viewing by creating a front-end interaction of report data, such as ePRO completion rate and patient visits completion, by utilizing flexmonster API for display and modification

SOFTWARE ENGINEER - snapIoT (Acquired by Covance - Jan 1, 2021) - January 7, 2019 - January 1, 2021

- Expanded users' clinical trial capabilities on the management application by creating new features such as questionnaire scheduling and patient information display via Angular components, allowing for adhoc questionnaire scheduling and patient schedule re-adjustments
- Upgraded the questionnaire system by utilizing the flowable API system and Angular, creating the infrastructure for scheduling reminders and questionnaires to patients, decreasing the non-compliance rate of patients
- Reduced work of adding new user permissions manually for existing users by creating a reusable SQL script, streamlining the entire process and reducing the work from hours to mere minutes

JUNIOR FULL STACK WEB DEVELOPER - EDITS LLC - February 7, 2017 - March 30, 2018

- Rebuilt website with Node.js and ReactJS to create a more efficient and better user experience
- Ensured state based data transfer between React components through the implementation of Redux
- Restructured legacy MySQL database using Sequelize to implement new website features and create a more efficient data structure while versioning existing tables, allowing for continued expansion of the data tables
- Learned and applied libraries such as Lodash and Stripe to effectively meet feature requirements and improve user experience

Education

UNIVERSITY OF CALIFORNIA - SAN DIEGO

Bachelor of Science in Computer Science

La Jolla, California

Graduated: December 2016

Skills

- **Languages:** TypeScript, JavaScript, Java, Groovy, SQL, HTML/CSS
- **Frameworks/Libraries:** React, Angular, Redux, Node.js
- **Databases:** MySQL
- **Tools:** Git, Jenkins
- **APIs/Technologies:** REST APIs, Flowable API, Flexmonster API
