Summary

Software Engineer with 8+ years of experience developing web applications and software solutions using TypeScript, JavaScript, React, Angular, Node.js, SQL, and MySQL. Experienced in full-stack development, API integrations, data-management workflows, client-facing features, and production support for healthcare and clinical-trial applications within Agile/Scrum development environments.

Work Experience

PROFESSIONAL DEVELOPMENT - May 2, 2025 - Present

- Rebuilt personal portfolio using React and developed personal projects to practice AI-assisted software development using Claude to support development, debugging, and exploration of implementation approaches.

SOFTWARE ENGINEER - Fortrea (spin-off from Labcorp) - July 1, 2023 - May 2, 2025

- Engineered and enhanced client-facing features, including custom reports with thousands of entry points, visual dashboards, and configurable patient event scheduling to support evolving functional requirements
- Resolved 15-30+ production support tickets monthly by analyzing audit trail entries and AWS logs, increasing clientele retention
- Delivered feature enhancements through new Flowable processes and Groovy scripts as part of a 9-15 person engineering team, aligning releases with evolving client requirements resulting in accurate and efficient clinical trial application usage
- Collaborated with project managers on up to 5 concurrent clinical trials for finalizing deliverable requirements such as patient invitations to clinical trial, scheduling, and questionnaires resulting in accurate deliverables and timelines for both client and project managers
- Eliminated patient data discrepancies across hundreds of thousands of records through use of MySQL queries by correcting erroneous data as per client requests, generating reports for analysis, and preventing future discrepancies

SOFTWARE ENGINEER - Labcorp Drug Development (Covance) - January 1, 2021 - July 1, 2023

- Expanded the clinical trial management interface with a new data management page, giving teams greater control and security over patient records
- Improved patient data security and accuracy through the creation of a multi-approval process for specific user roles to be utilized for patient data change requests, allowing more client control of patient records
- Developed and implemented data status workflows validated by patient data API calls to support clinical trial database lock procedures, allowing for smoother clinical trial completion transition
- Enhanced patients' data viewing by creating a front-end interaction of report data, such as ePRO completion rate and patient visits completion, by utilizing flexmonster API for display and modification

SOFTWARE ENGINEER - snapIoT (Acquired by Covance - Jan 1, 2021) - January 7, 2019 - January 1, 2021

- Expanded users' clinical trial capabilities on the management application by creating new features such as questionnaire scheduling and patient information display via Angular components, allowing for adhoc questionnaire scheduling and patient schedule re-adjustments
- Upgraded the questionnaire system by utilizing the flowable API system and Angular, creating the infrastructure for scheduling reminders and questionnaires to patients, decreasing the non-compliance rate of patients by approximately 20%
- Reduced work of adding new user permissions manually for existing users by creating a reusable SQL script, streamlining the entire process and reduced the work from hours to mere minutes per new permission added

JUNIOR FULL STACK WEB DEVELOPER - EDITS LLC - February 7, 2017 - March 30, 2018

- Rebuilt website with Node.js and ReactJS to create a more efficient and better user experience with a team size of 3 developers
- Ensured state based data transfer between React components through the implementation of Redux
- Restructured legacy MySQL database using Sequelize to implement new website features and create a more efficient data structure while versioning existing tables, allowing for continued expansion of the data tables
- Learned and applied libraries such as Lob and Stripe to effectively meet feature requirements and improve user experience

Education

UNIVERSITY OF CALIFORNIA - SAN DIEGO

Bachelor of Science in Computer Science

La Jolla, California

Graduated: December 2016

Skills

- **Languages:** TypeScript, JavaScript, Java, Groovy, SQL, HTML/CSS
- **Frameworks/Libraries:** React, Angular, Redux, Node.js
- **Databases:** MySQL
- **Methodologies:** Agile/Scrum
- **Tools:** Git, Jenkins
- **APIs/Technologies:** REST APIs, Flowable API, Flexmonster API
